## 1.Installation

Graphical Representation	Description
 A line drawing of a drone from a top-down perspective. A small screw is shown being loosened from the underside of the drone's central body. A red dot indicates the location of the screw.	<p>1. Loosen the screw on the underside of the drone.</p>
 A line drawing of a drone with a gimbal assembly being attached to the bottom plate. A red dot indicates the alignment point for the gimbal.	<p>2. 3. Mount the Gimbal onto the bottom plate, and secure it with the fixing screw.</p>
 A line drawing of a drone with the gimbal assembly mounted. A red dot indicates the location of the plug on the underside of the drone.	<p>3. Insert the plug from the gimbal into the corresponding socket on the underside of the drone, and tighten the waterproof cap on the plug. (Please Note: Be sure to align the plug correctly before inserting it, excessive force can damage the plug and connector socket, and if powered up, can damage the camera, and the drone)</p>
 A line drawing of a drone with the gimbal assembly fully installed and secured to the bottom plate.	<p>4. Finished.</p>

## 2. Operation

### 3. Camera

The camera offers maximum support for 24 frames per second of 4K video. Its superior electronic image stabilization technology, and combined with the design of a high-precision waterproof mechanical gimbal system, it can guarantee the stability of the camera in high-speed movements, with loss less and real-time shooting of video and photos.

#### Install Micro SD card

1. Please open the soft rubber stopper at the top of the camera and insert the Micro SD card in the right direction.

2. Fasten the rubber stopper

Wifi switch: Short press ON, press OFF again again.

 Splash Drone 3 camera system supports up to a maximum capacity 64GB Micro SD card. Since the camera requires fast read and write speeds of high bit stream video data, use Class 10 or UHS-1 and above Micro SD card to ensure normal camera recording.

 Please turn off the camera's WiFi switch before take off, so as not to interfere with the flight control or video transmission signals during flight.

 Do not insert or unplug the Micro SD card while recording, otherwise the data file may be corrupted or lost.

 To ensure the stability of the camera system, the duration of a single video is limited to 15 minutes.

# Camera settings and use

## 1. APP installation:

IOS systems- for apple devices, please find the SwellCam APP in the apple store, and install the APP.

Android systems can download the APK installation on the [www.swellpro.com](http://www.swellpro.com) site

## 2. Camera WIFI connection: Please Note, the WiFi is used for preflight setup purposes only, and must be disabled prior to take off.

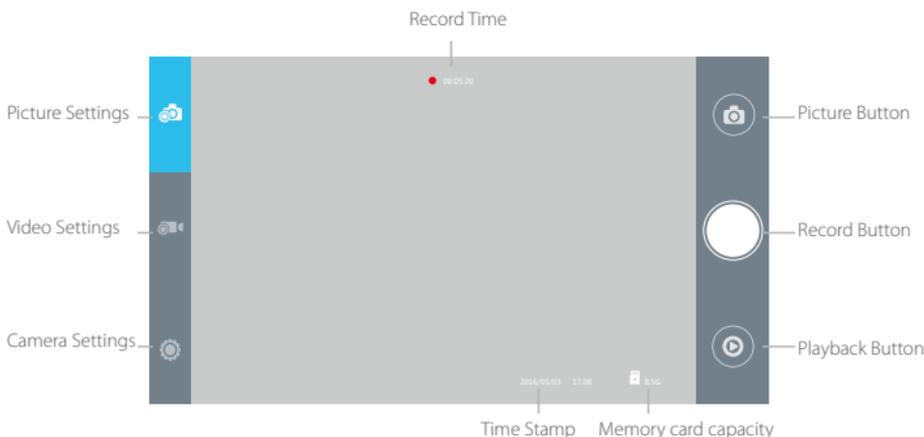

a.) Power on the drone, the camera will power on automatically, switch on the camera WIFI, the red indicator lights up indicating the camera is on and is in wifi mode.

b.) Open the WIFI on your phone, search for the name of SwellCam mobile devices, and request to connect, enter the initial password - 12345678, and connect.

## 3. Using the APP:

Open the camera APP into the camera preview screen.

On the APP, you can set the parameters of the camera and video, you can also control the camera for the taking of pictures or videos, and other related functions.
